EDUCATION

Goa university

Electronics and Telecommunication Bachelors

Percentage: 60%

Goa, India

July 2015 - July 2019

EXPERIENCE

In Time Tec | Senior Software Engineer

Bangalore, India | January 2021 - July 2026

- Progressed from Junior Software Engineer to Senior Software Engineer over 5 years, architecting fintech, SaaS, and IoT platforms across Node.js, NestJS, React.js, Next.js, and Vue.js.
- Designed a Backend-for-Frontend (BFF) gateway architecture for a government-scale IoT platform, centralizing authentication, session management, and service orchestration across NestJS microservices. Implemented PKI-based robot fleet onboarding end-to-end CSR/JWS generation, certificate issuance, and mutual TLS (mTLS) authentication with automated certificate lifecycle management, eliminating manual renewal overhead.
- Led a team of 6 engineers, mentoring 10+ developers and improving code quality by 30% through defined coding standards and structured code reviews.
- Wrote 100+ unit and integration tests with Jest and Cypress, reducing staging bugs by 95%, and delivered 10+ key initiatives at a 90% on-time delivery rate.
- > Collaborated directly with product managers and cross-functional teams to translate business requirements into scalable technical solutions.

SKILLS

Programming Languages: JavaScript, TypeScript

Libraries/Frameworks: Node.js, NestJS, Express.js, REST APIs, Microservices, Event-Driven Architecture, React.js, Next.js, Vue.js (2 & 3), TanStack Query, Redux, Vuex, Vuetify, Tailwind CSS, HTML5, CSS3, RabbitMQ, Apache Kafka, MQTT, Redis, PKI/mTLS, OpenSSL, RBAC, Jest, Cypress, SuperTest

Tools / Platforms: Docker, CI/CD, Git, Bitbucket, Postman

Databases: PostgreSQL, MongoDB, Supabase, Prisma, Mongoose

PROJECTS / OPEN-SOURCE

FlowCommerce - Personal | [Link](#)

Next.js NestJS, PostgreSQL, Prisma, TypeScript, Swagger, Redis,

RabbitMQ, Docker

- Architected and developed a production-grade multi-tenant SaaS gym management platform using Next.js and NestJS, following Domain-Driven Design principles with a modular monolith architecture designed for future microservice extraction.
- Built end-to-end business workflows for authentication, customer management, membership plans, subscription lifecycle, payments, invoicing, attendance, and dashboard analytics, with RBAC, tenant isolation, immutable financial records, and comprehensive audit trails.
- Established a production-ready backend with Dockerized deployment, health/readiness endpoints, event-driven architecture, comprehensive unit/e2e testing, and a scalable foundation for Redis caching, RabbitMQ messaging, and CI/CD pipelines.

Money Journeys - Client Project | [Link](#)

Next.js, Supabase, React.js, PostgreSQL, Plaid, Docker

- Architected a multi-tenant fintech platform for goal-based financial planning and real-time progress tracking using Next.js, Supabase, React.js, and PostgreSQL.
- Built a scalable monorepo with event-driven financial microservices, reducing cross-team release friction and enabling independent service deploys.
- Integrated the Plaid API for bank account connectivity and automated transaction categorization, removing manual data entry for end users.

Dubai Future Foundation | Link *NestJS, Redis, RabbitMQ, MQTT, Kafka, Prisma, OpenSSL, Docker*

- Designed a Backend-for-Frontend (BFF) architecture via API gateway for centralized authentication, session management, and service orchestration across multiple downstream services.
- Implemented PKI-based robot onboarding end-to-end setup-key exchange, CSR/JWS generation, certificate issuance, and mutual TLS (mTLS) authentication with automated certificate lifecycle management to eliminate manual renewal.
- Developed secure multi-tenant APIs for user management, robot fleet management, and workflow automation with Role-Based Access Control (RBAC) and bulk operation support.

Sekady Platform - Client Project | Link *Node.js, TypeScript, MongoDB, Vue.js, Jest, Cypress*

- Built scalable fintech and SaaS platforms for secure payment processing, ACH/wire transfers, and construction payment workflows.
- Developed 30+ backend APIs and core product features, improving performance and delivering business-critical functionality.
- Led a team of 6 engineers, mentored 10+ developers, and established coding standards and code review practices.
- Delivered 10+ major initiatives with a 90% on-time delivery rate while reducing staging bugs by 95% through comprehensive testing.

CERTIFICATIONS

- Udemy JavaScript, TypeScript, Node.js, Vue.js, React.js

HONORS & AWARDS

- Recognized by client stakeholders for exceptional contributions in delivering critical project components on high-visibility initiatives
